

## Weather-Forecasting-System:

We are in the era where not only the human beings but also things are connecting each other over the internet, gathering information, analyzing it and helping everyone with a particular task. Our project is mainly focused in environmental monitoring and Quality research. Our research has shown that air quality can have a drastic impact on long time health. There are many aspects to air quality, we breathe sickness. Carbon monoxide plays a major role in polluting our environment. So, in this project, we have tried to Analyse and Display the Air Quality using ML and Weather API.
